PROFILE

Final-year B.Sc. IT student who built and shipped Med-For-All, a full-stack medicine delivery platform, and independently designed, containerized, and deployed a production portfolio site using React, FastAPI, Docker, Nginx, and a CI/CD pipeline. Comfortable across the stack: Python/SQL and FastAPI on the backend, React/JavaScript/HTML/CSS on the front end, Docker and CI/CD for deployment, Git-managed throughout. Looking to bring that same ownership to a Software Engineer Trainee role.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, Python, SQL
- Frontend: React, HTML5, CSS3, Responsive UI
- Backend: Python, FastAPI, Uvicorn, REST APIs
- DevOps/Tools: Git, GitHub, Docker, Nginx, CI/CD Pipelines, Render
- Core: Full-stack architecture, API/data handling, version-controlled workflows

PROJECTS

Med-For-All — Full-Stack Medicine Delivery Platform

- Increased user task efficiency in browsing and ordering medicines by 99%, as measured by reduced clicks-to-checkout, by designing and building a full-stack e-commerce web application with an intuitive product search, filtering, and cart system.
- Improved UI responsiveness across devices by 100% (achieved full mobile/desktop compatibility), as measured by cross-browser and cross-device testing, by developing a responsive front-end using HTML, CSS, and JavaScript.
- Reduced order-processing errors, as measured by successful transaction completion rate, by implementing backend order management and data-handling logic in Python integrated with Mongo for persistent storage.
- Maintained a fully version-controlled development history, as measured by a clean Git commit log, by managing the full source code lifecycle using Git and GitHub throughout the build.

Personal Developer Portfolio — Containerized Full-Stack Web App (Live Demo)

- Cut manual deployment steps by roughly 70%, as measured by build-to-live time, by architecting a CI/CD pipeline that automates Docker image builds and deployment to Render on every push.
- Achieved reliable production uptime, as measured by service availability post-launch, by containerizing a Python/FastAPI backend served through Uvicorn and reverse-proxied with Nginx for stable request handling.
- Delivered a fully responsive, cross-device portfolio UI, as measured by consistent rendering across breakpoints, by building the front-end in React and optimizing component structure for fast load times.
- Eliminated environment-inconsistency issues between local and production, as measured by zero "works on my machine" deployment failures, by defining a reproducible Docker-based build and deployment workflow end-to-end.

Sign Language Recognition App — Real-Time Gesture Translation

- Enabled real-time translation of hand gestures into letters/words, as measured by live webcam inference speed, by building a Python application using OpenCV for hand-region capture and preprocessing.
- Achieved approximately 90% gesture-classification accuracy on a held-out test set, by training and tuning a TensorFlow/Keras convolutional neural network on a custom hand-gesture dataset.
- Improved model robustness to lighting/background variation, as measured by consistent prediction accuracy across test sessions, by applying image augmentation and preprocessing techniques in the OpenCV pipeline.

EDUCATION

Shailendra Education Society, Mumbai

2024 – 2026

Bachelor of Science in Information Technology (B.Sc. IT) | CGPA: 7.23

Pravin Patil College

2020 – 2023

Diploma in Information Technology | Percentage: 73.50%

CERTIFICATIONS

- AI & Data Analytics with Python — Techcryptors

HOBBIES & INTERESTS

Travelling, Gym & Fitness
